FUNCTIONS & FEATURES

The R7L interfaces analog and discrete I/O signals with a PC via LonWorks.

A 'basic' module can be attached with an 'extension' module. By combining two modules, single station can handle mixed analog and discrete signals, 32-point discrete inputs, 32-point discrete outputs, 16-point discrete I/Os and other combinations of signals.

Single module can handle multiple Functional Blocks, not only the discrete I/O, but also the pulse count input, one-shot output, scaling, alarm output, and so forth.

Input sensor type (thermocouple, RTD) and range can be selected using the LNS Plug-in Software (model: R7LPLG).

■ HOST PC CONNECTION

DATA CONVERSION

■ 0 – 100% DATA CONVERSION

Analog input data is converted into digital representations of 0 – 100% proportional to each scaled range. The converted % values are expressed in signed 16 bits.

Overrange input is possible from -15 to +115% of the nominal range. When the signal exceeds the limit, the data is fixed at -15% or +115% respectively.

• Input Range 0 – 5V DC

Input Value	Input %	Converted Data, Decimal
$\leq -0.75\text{V}$	-15%	-15.00
0V	0%	0.00
5V	100%	100.00
$\geq 5.75\text{V}$	115%	115.00

Analog output is converted in the reverse order of the input data. The output range 0 – 5V DC is expressed as 100.00 at 5.0V (100%) and 0.00 at 0V (0%).

■ TEMPERATURE DATA CONVERSION

Temperature data (thermocouple and RTD) are represented in engineering unit value, °C, expressed in signed 16 bits.

• Input Type K Thermocouple

Input Value	Converted Data, Decimal
$\leq -272^{\circ}\text{C}$	-272.0
-150°C	-150.0
1370°C	1370.0
$\geq 1472^{\circ}\text{C}$	1472.0

EXTENSION MODULE

A 'basic' module can be attached with one 'extension' module. The extension module is powered from the basic module.

By combining two modules, single station can handle mixed analog and discrete signals.

Settings of the extension module are handled by Functional Blocks of the basic module. Refer to the instruction manual of the basic module for more information.

■ OUTPUT AT THE LOSS OF COMMUNICATION

The extension module is set to 'Hold Output' by factory default setting. The LNS Plug-in Software (model: R7LPLG) is used to change the setting to 'Reset Output.'

■ CONNECTING THE EXTENSION MODULE

- 1) Remove the extension connector cover located at the side of the basic module.
- 2) Connect the extension module.

- 3) Mount the combined module on a DIN rail.
