FUNCTIONS & FEATURES

The R7MWTU is a Multi Power Monitoring Module for
Modbus.

The R7MWTU uses clamp-on current sensors, there is no

need of current transformers.

Current sensors are easy to install in existing systems. Wide
input range of 5 to 600 A is available.

All measured values, counter values, display mode, setting
data are stored in the non-volatile memory when power is
off.

A 'basic' module can be attached with an 'extension'
module (except R7MWTU-211-AD4) because of this, it is able
to use it as 2-circuit power and 8 discrete inputs module.

Downloadable at M-System's web site.

A dedicated cable is required to connect the module to the
PC. Please refer to the internet software download site or
the users manual for the PC configurator for applicable
cable types.

- Clamp-on current sensor (model: CLSE)

The clamp-on current sensors, not included in this product
