22.5

- II (1)G [EEx ia] IIC
 I (M1) [EEx ia] I

 Ex-rated intrinsically safe
- Full galvanic separation of circuits (IN-OUT, IN-SUPPLY, OUT-SUPPLY)
- ✓ Accuracy 0.1%
- Casing can be mounted on a standard TS35 rail

Application and functions

The ZS-30EEx1 power supply and isolator is a partially intrinsically safe device with an external (input) intrinsically safe circuit.

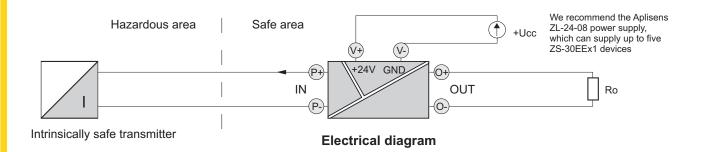

The ZS-30EEx1 is designed to supply power to intrinsically safe transmitters used in a hazardous area, with a 4...20 mA signal in a two-wire transmission, and to transform that signal through a galvanic separation circuit into one of the standard signals used in automatic control.

The supply voltage of the intrinsically safe input circuit of the standard version of the ZS-30 Ex1 is 25 V DC. At the customer's request this voltage can be altered to 16, 18, 22 or 24 V DC.

The output circuit can be connected to any apparatus with a separated supply voltage of < 250 V (from transformer-based network supplies).

Calibration

The user can adjust the setting of the start-point and width of the range using potentiometers accessible via marked holes in the front panel.
